

SPILL CONTAINMENT PALLET

FOR USE WITH FORKLIFT

VSP104D-F

Description

Vangards pallets are characterized by high strength, reliability, load capacity, safety and stability. It can hold a large amount of spills fluids, which helps to store and transport oil tanks, barrels with chemicals products and others containers, preventing and controlling possible spills that may occur during the process. The hexagonal drain plug facilitates the drainage of the contained liquid and its subsequent cleaning.

Features

- Thicker side border and central load-bearing structure is very strong, which can firmly carry fully- loaded oil drums, chemical barrels and other storage containers and equipment.
- Made of polyethylene, anti-UV, anti-rust, anti-corrosion, suitable for most chemicals products. They are injection molded which avoids joints that can weaken and break causing leakage of the liquid contained.
- High strength grates to prevent breakage during loading. They are anti-slip, which guarantees a stable storage of the drums.
- Holes in the grates can prevent accidental splashing of hazardous chemicals, during filling, subpacking or storage. The grates are easily removable, for quick treatment of liquid spills and easy cleaning.
- Pallets can be transported by hydraulic forklift and forklift truck.
- The design allows the pallets to be stacked, which saves spaces and facilitates transport.
- They help keep the floor clean and dry to prevent falls. In addition, to contribute to the protection of the environment by reducing the risk of water and soil contamination.

Standard

Complies with U.S. Environmental Protection Agency regulations 40 CFR 264.175. (EPA) and regulations of the Spill Control and Prevention Act (SPCC), as well as the U.S. NPDES.

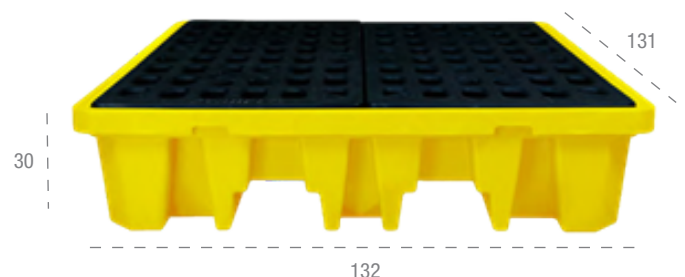

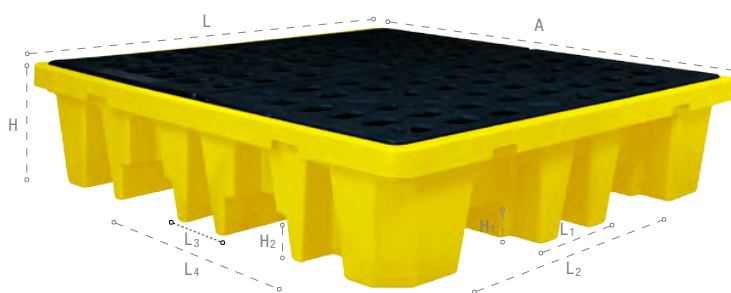

Materials

High density polyethylene, yellow color, with Anti-UV treatment.

Dimensions

Drum Quantity 55Gal/200L	Sink Capacity (Gal/L)	Weight Capacity (Kg)	Dimensions (Al×L×A/cm)	Forklift Operation
4	70/265	3000	30x132x131	Bi- directional

Detailed Dimensions in cm

SPILL CONTAINMENT PALLET

FOR USE WITH FORKLIFT

VSP104D-F

*Pallets can be joined together to form a leak retention workstation as shown in the image below.

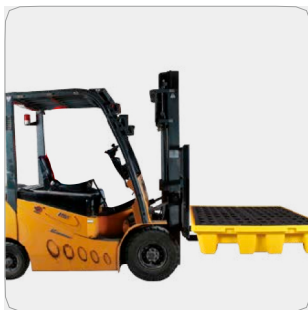

Spill proof pallets are easily transportable

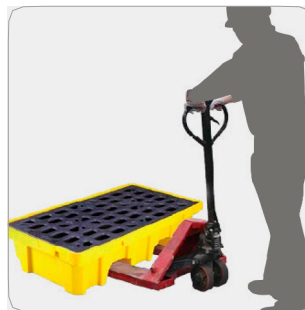

They have hexagonal plug for drainage.

The design of the pallets for 2 or 4 drums, allows the pallets to be stacked, which saves spaces and facilitates transport.

Spill pallets have slots for forklift use (*please note that is prohibited to transfer a loaded pallet with a forklift).

Hydraulic forklift can also be used to move the pallets easily.

Additional accessories such as pallets ramps make it easier to load items.
